Expel is a technology company that built a platform (Expel Workbench) to enable delivery of our 24x7 Managed Detection and Response (MDR) service delivery. The Expel Workbench platform is used by both analysts and customers to communicate, triage, investigate and remediate incidents.

When Expel was founded, we had the goal of making our platform “flypaper for inventors.” What this means is that, if you have an idea, you should be able to safely test it out on top of our platform using existing technology levers (in this case APIs).

The Expel Workbench is **JSON API compliant** and uses swagger for API specification/documentation. You can find Expel’s swagger doc [here](#). Pyexclient is the pythonification of the JSON API spec. The pyexclient client code, and much of the documentation, is auto generated from swagger spec file.

About the documentation

The pyexclient documentation is composed of the following sections:

- Introduction – Brief background and description of Expel and pyexclient.
- *Getting Started* – How to get started using pyexclient and walks through requesting an API key.
- *Understanding the client* – Provides intuition and background on the pythonification of JSON API spec.
- *Usage and Examples* – Reading this section should enable you to have an intuitive sense for how to accomplish your specific needs. A large number of example uses in this documentation can implement everything from creating and updating an investigation, to extracting all source/dest IPs associated with Expel alerts.
- *API Reference* – Detailed API reference.

CHAPTER 2

Getting Started

There's one precondition to using pyexclient: you must have a Workbench user account. This means you need to be a customer or going through a POC with Expel.

If you have an Expel Workbench account, you can authenticate to *Expel using MFA* or you can request an API key.

2.1 Requesting an API key

To get an API key, you'll need to reach out to your Expel Engagement Manager. In the future we'll make the API key generation a self-serviceable feature.

2.2 Installation

Pyexclient requires Python3.9+ and the requests package.

To install pyexclient using pip, run:

```
$ pip3 install pyexclient
```

Understanding the Client

Becoming familiar with pyexclient requires understanding three main properties of the JSON API spec and how the pyexclient implements them. They are:

- *Resource Objects* – These are implemented as python classes. Each class is documented and referenced in the API Reference section.
- *Attributes* – These are updatable/readable fields per resource object. They're implemented as python members of a class. There are certain fields that are read-only. Currently you can update them in the python class, but if you POST (try to save) those changes, they'll fail. The documentation of each attribute calls out which fields are read-only.
- *Relationships* – These are specific links from one resource object to another.

Warning: As a user of the client you can delete any object within your tenant. Expel keeps point in time as well as daily back ups, but you're using the **delete functionality at your own peril and risk**.

3.1 Resource Objects

It's useful to think of resource objects as logical containers for attributes and relationships. A resource object within Expel Workbench is just a data table in a database. Relationships are links to other tables and attributes are columns in a table. This intuition is helpful as we build complex tasks.

Every resource object is documented in the API reference section. Each resource object has a table containing the following:

- Field Description – A description of the given field
- Field Name – The name of the field to reference it in code
- Field Type – The type of field it is. If the field is a relationship, this will be a hyperlink to the resource object.
- Attribute – Yes / No indicates if the field is an attribute
- Relationship – Yes / No indicates if the field is a relationship.

Pyexclient has properties representing each resource object. Each documented resource (see [API Reference section](#)) has a resource type field. The value of this field is the property name. So, if for example, we want to work with investigations, we would find the [Investigations](#) resource object in the API reference section and see that it is called investigations. We can then use this property to do any of the creating or retrieving.

See examples on [creating](#), [retrieving](#), [listing](#) and [finding](#) resource objects.

3.2 Attributes

Every resource has a set of attributes. There will always be an id, and a created_at attribute. The attributes are used by Expel Workbench UI and automated systems to reason about various activities and to reflect/updated status.

Attributes can be used to filter down to specific resource objects that you're interested in. See [Finding Open Investigations](#) for an example. Not sure what attributes are available for a resource object? Check out the Attribute column in the API docs for the resource. Rows where the Attribute column is "Y" indicate the given field is an attribute of the object, not a relationship to another object.

Attributes are accessible like any attribute on a python object. Changing them, and then calling the save method will write the changes back to Expel Workbench.

3.3 Relationships

Relationships describe the linkage between two different resource types. There are two types of relationships an resource object can have. The first is one to one, where the relationship represents a relationship to another single resource instance. The second type of relationship is one to many, where the relationship would encompass multiple resource instances.

Note: It's not entirely clear from the documents which relationship is one to one versus one to many it's something we'll look at addressing in the future.

The most common task when working with relationships is to retrieve the full resource object referenced by the relationship. For example, let's say we want to grab the name of the actor that is assigned to the investigation with ID cf9445b1-a0aa-4092-af5f-ecdc136d1661.

```
inv = x.investigations.get(id="cf9445b1-a0aa-4092-af5f-ecdc136d1661")
print(f"Assigned to actor name {inv.assigned_to_actor.display_name}")
```

This pattern will retrieve the full underlying resource referenced by the relationship assigned_to_actor, which is a relationship between a resource type of Investigation. In this case, an Investigation instance (ID = cf9445b1-a0aa-4092-af5f-ecdc136d1661) and an instance of the [Actor](#) resource.

In the case of a one to many relationship, where you want to retrieve the full resource object you would do the following:

```
for ea in x.expel_alerts.search(expel_severity=neq("TESTING")):
    for va in ea.vendor_alerts:
        print(va.vendor_sig_name)
```

In the above example, the Expel alerts resource object has a one to many relationship with vendor alerts and in this situation you'd iterate over them to see every instance that is part of that relationship.

Sometimes you just want to know the identifier of the resource referenced by the relationship. In this example we're just retrieving the ID for the actor assigned to our investigation. To do this you can do the following:

```
inv = x.investigations.get(id="cf9445b1-a0aa-4092-af5f-ecdc136d1661")
print(f"Assigned to actor id {inv.relationship.assigned_to_actor.id}")
```

Note in the above code snippet how we use `relationship`, this tells pyexclient that you just want the ID for the relationship and not the full resource object.

3.3.1 Modify Objects

Modifying an object with pyexclient can be done by retrieving the object, updating its attributes and then saving the updated object. For example:

```
inv = x.investigations.get(id="myinvestigationid")
inv.title = "My updated investigation title"
inv.save()
```

This can also be simplified with the below syntax (which will automatically call `.save()` for you):

```
with x.investigations.get(id="myinvestigationid") as inv:
    inv.title = "My updated investigation title"
```

Usage and Example use cases

Before diving into example use cases, it's important to grasp the basics of the pyexclient. The basics will allow you to implement your own custom use cases.

4.1 The basics

Every resource type supported by Expel Workbench is implemented as a python class in pyexclient. The base resource type class has four methods implemented along with a context handler and iter method. Understanding how to use these concepts will make you a rockstar (sorry had to) when it comes to building or improving your automated use cases. Let's walk through each method in detail.

All code snippets below assume you've *authenticated* and have the authenticated pyexclient in the variable `x`.

4.1.1 create(...)

The create method is used to create new instances of a resource type. You can see examples of this *create comment*, or *create investigation*. You must call *save()* for changes/creations to be written back to the server. Every attribute for the given resource type can be specified (via its field name) as a named parameter to the create method. In addition to specifying the values of attributes for a specific resource type, you can also specify relationships when creating a new resource type. To specify a relationship when creating a new resource type you'll prepend `relationship_` and then relationship name. The value is going to be the identifier to the already existing resource type that the relationship will link to. Some relationships are required when creating a new instance of a resource type. Let's look at a sample:

```
ACTOR_ID = "5ac919dd-352d-4cde-a5b3-c0c3ed77a318" # Current User ID
CUSTOMER_ID = "d44fcb09-90e3-44a2-831e-f381aaec37f5" # Customer ID
inv = x.investigations.create(title="New Incident", relationship_
↳organization=CUSTOMER_ID, is_incident=True, analyst_severity="MEDIUM",
↳relationship_assigned_to_actor=ACTOR_ID)
inv.save()
```

The above snippet creates an incident with a severity of *Medium*, title of *New Incident* that is assigned to *ACTOR_ID*. The other way to create a new instance is:

```
ACTOR_ID = "5ac919dd-352d-4cde-a5b3-c0c3ed77a318" # Current User ID
CUSTOMER_ID = "d44fcb09-90e3-44a2-831e-f381aaec37f5" # Customer ID
inv = x.investigations.create(title="New Incident", is_incident=True)
inv.relationship.organization = CUSTOMER_ID
inv.relationship.assigned_to_actor = ACTOR_ID
inv.save()
```

This snippet accomplishes the same thing as above but to some maybe easier to read.

4.1.2 get(...)

The get method is used when you already know the identifier of the existing resource instance you want to retrieve. Once you've retrieved the resource instance you can read and/or modify the resource instance's attributes.

```
inv = x.investigations.get(id="22adb298-1e9e-424c-a754-b8ab09f38282")
inv.title = "New Title"
inv.save()
```

The above snippet changes the title of the investigation. You must call `save()` to have changes written back to the Expel Workbench. Otherwise the changes are just local and useless.

4.1.3 save(...)

This method will POST any changes to the resource instance back to the Expel Workbench. If you do not call this method after making modifications the modifications will not be reflected in Expel Workbench.

4.1.4 search(...)

Understanding this method means you can easily access resource instances that meet complex criteria without having to iterate through tons of data. The search method pushes the filtering logic to the server side for evaluation and only returns instances that matched the criteria. There are six useful operators to be aware of when building search criteria. Let's walk through examples of each:

neq()

This operator will return resource instances where the specified attribute is not equal to the value provided to `filter_by`.

```
for rem_act in x.remiation_actions.search(status=neq("CLOSED")):
    print(f"Recommended remediation action is {rem_act.action} the status is {rem_act.
    ↪status}")
```

In the snippet above we're searching for any remediation action that is not currently closed. Then we print the remediation action text and the current status.

contains()

Warning: Partial matches are not indexed and API performance can be impacted by doing a lot of these requests. Investigative data is indexed and optimized for searching, but you must use `search=flag("term")`.

This operator will do a substring search (“partial match”) on a given attribute’s value and return the resource instances that have a partial match. This search operation is case insensitive. This operator will return resource instances where the specified attribute is equal to the value provided to filter by.

```
for cmt in x.comments.search(comment=contains("oops")):
    print(f"Found comment with word oops in it {cmt.comment}")
```

The above snippet will search all comments in Expel Workbench and return any instance where the comment contains the word “oops.”

startswith()

This operator will return instances of resources where the value of a specified attribute starts with the provided text.

```
for cmt in x.comments.search(comment=startswith("hey")):
    print(f"Found comment that starts with hey '{cmt.comment}'")
```

isnull(), notnull()

It allows you to search for instances where a specified attribute is null or not null.

```
for rem_act in x.remdiatation_actions.search(status=isnull()):
    print(f"Recommended remediation action is {rem_act.action} the status is null")

for rem_act in x.remdiatation_actions.search(status=notnull()):
    print(f"Recommended remediation action is {rem_act.action} the status is not null
    ↪")
```

gt(), lt(), window()

You can specify a field should be greater than, and/or less than a value by using the `gt()` or `lt()` operators respectively. To do searches over a range or window you’ll use the `window()` operator.

```
start_date = (datetime.datetime.now()-datetime.timedelta(days=1)).isoformat()

for cmt in x.comments.search(comment=startswith("hey"), created_at=gt(start_date)):
    print(f"Found comment in past 24 hours that starts with hey '{cmt.comment}'")
```

The above snippet looks for comments starting with the word “hey” that were created in the past 24 hours.

```
end_date = datetime.datetime.now().isoformat()

for cmt in x.comments.search(comment=startswith("hey"), created_at=lt(end_date)):
    print(f"Found comment in past 24 hours that starts with hey '{cmt.comment}'")
```

The above snippet does the same thing looking for comments created at a timestamp less than the current time. Finally the window operator:

```
start_dt = (datetime.datetime.now()-datetime.timedelta(days=3)).isoformat()
end_date = (datetime.datetime.now()-datetime.timedelta(days=1)).isoformat()

for cmt in x.comments.search(created_at=window(start_dt, end_date), ↪
    ↪comment=startswith("hey")):
    print(f"Found comment in past 2 days that starts with hey '{cmt.comment}'")
```

This example looks for comments created in past two days that start with “hey”. The window operator supports strings, integers and datetime objects.

flag()

Our API supports a custom query parameter called flag. Flag allows callers to pass variables to the backend. Flags are defined on a resource by resource basis, and will alter the behavior of a given API call. The most commonly used flag parameter will be “search” which will search investigative data in a highly optimized way.

```
for inv in x.investigations.search(search=flag("ransomware")):
    print(f"Incident related to ransomware: {inv.title}")
```

limit()

The API supports a limit operator that will limit the number of results returned by the server in each requested page. This can be used when you are calling an API and you only need, or care about one result. Note if you iterate over responses, you will continue to request pages with this specified size. Pair this operator with one_or_none() to retrieve a single resource.

```
inv = x.investigations.search(limit(1)).one_or_none()
print(f"Investigation: {inv.title}")
```

4.1.5 relationship(...)

Sometimes you may want to work with a resource type, but you want to filter based on criteria applied to another resource type that it has a relationship to. This is most common when you are wanting to filter resource type objects that are voluminous like investigative actions. You can specify you’re wanting to filter on a relationship resource type by using the relationship operator. Let’s look at a few examples:

```
start_date = (datetime.datetime.now()-datetime.timedelta(days=1)).isoformat()
for inv_act in x.investigative_actions.search(relationship("investigation.created_at",
↪ gt(start_date)), action_type="MANUAL"):
    print(f"Found investigative action associated with manual investigation created_
↪ in the past 24 hours {inv_act.title}")
```

This snippet applies filtering criteria to two attributes. The action_type attribute lives in the investigative_action resource type and filters out any investigative action that is not manually created. The next filter is applied to investigation resource type. In this case there’s a relationship between investigations and investigative actions. This scopes what search returns to investigative actions that are associated with investigations that have been created in the past 24 hours.

4.1.6 Context Handler

There’s a context handler implemented for all resource types. It makes it easy to save changes to existing resource instances. It can be used by specifying the resource type as a property in conjunction with a call to the get method().

```
with x.investigations.get(id="53212cd8-475e-442e-8102-28d20ca33246") as inv:
    inv.title = "New Updated Title"
```

This will update the investigation with a new title and save it back to the API.

4.1.7 Iteration / Pagination

Iterating over all the instances of any resource type is as simple as a for loop.

```
for expel_alert in x.expel_alerts:
    print(f"Expel Alert {expel_alert.expel_name}")
```

Pyexclient will handle the pagination of results and will yield each instance in the for loop. This allows for easy implementation of filtering logic on the client side should you so desire.

```
for expel_alert in x.expel_alerts:
    if expel_alert.expel_severity != "HIGH":
        continue
    print(f"Expel Alert {expel_alert.expel_name}")
```

The above snippet only prints Expel alerts with *HIGH* severity. You could also implement this with `search(expel_severity="HIGH")`.

4.2 Helpers

Pyexclient contains a number of helper methods that can be useful when performing common tasks.

Before diving into the helper methods, it's important to understand a little bit about Investigative Actions within Expel Workbench since the helper functions operate on investigative actions.

Background on Investigative Actions

Investigative actions are most commonly actions run by Expel's automated systems or analysts during the course of alert triage and/or during investigations/incidents. The actions type and parameters specified to the investigative action tell Expel's backend integration and tasking infrastructure to go gather specific types of data.

The acquired data is usually summarized and relevant information presented to the analyst and/or customer. The raw data can be downloaded from within Workbench, or viewed using Expel Workbench's built-in data viewer.

4.2.1 download(...)

Sometimes when you're automating tasks or integrating systems, you'll want the ability to access the raw data that the investigative action collected. This helper function makes downloading data from an investigative action easy. This can only be called on investigative action resource types.

```
with x.investigative_actions.get(id=inv.act_id) as ia:
    with tempfile.NamedTemporaryFile() as fd:
        ia.download(fd)
        pprint.pprint(json.loads(fd.read()))
```

The above example will download and print the JSON data backing the investigative action (`inv.act_id`).

4.2.2 create_auto_inv_action(...)

This helper function will automate the creation (subsequent execution) of an investigative action associated with a security device. This is how you can automate investigative tasks that are backed by Expel's integration with a security vendor.

```
ia = x.create_auto_inv_action(
    title='Query SIEM for activity involving 1.2.3.4',
    input_args={'query':'1.2.3.4',
                'start_time':'2020-09-03T13:38:19.539071',
                'end_time':'2020-09-03T16:38:19.539071'},
    capability_name='query_logs',
    vendor_device_id='my-vendor-device-guid',
    customer_id='my-organization-guid',
    reason='To see what else happened involving this IP.',
    created_by_id='my-actor-id',
    investigation_id='my-investigation-id',
)
```

In the above example, we ran an investigative action “Query Logs” which will query the security device for activity involving 1.2.3.4.

4.2.3 create_manual_inv_action(...)

This helper function will create a manual investigative action associated with an investigative action. Manual actions can be used to record investigative questions and answers that analysts wish to associate with an investigation.

```
ia = xc.create_manual_inv_action(
    title = "Investigate suspicious url evil.com",
    reason = "Research evil.com to see if it is actually suspicious.",
    instructions = "Investigate open source intel to gather additional details",
    Investigation_id = "my-investigation-id")
```

In the above example, we created a manual investigative action to investigate a suspicious URL. Once created, the action can serve as a placeholder for our results once we’ve gathered the relevant data. To complete the action, we can close it with results like so:

```
ia.status = "COMPLETED"
ia.results = "I investigated this URL and found it was not suspicious."
ia.save()
```

4.2.4 capabilities(...)

The capabilities helper function can be used to determine what automatic actions are possible for your organization based on the currently on-boarded integrations.

```
x.capabilities("my-organization-id")
```

4.3 Examples

We’ve provided examples based on what we’ve heard about from customers who are wanting to further integrate with our platform. There are three types of examples we’ve documented.

1. *Snippet* - This is code self contained in the documentation. Usually just a few lines.
2. *Script* - This is a whole python script that accomplishes the use cases. A brief description on each script is provided. The scripts themselves are in examples/ directory.

3. *Notebook* - A jupyter notebook that implements, mostly experimental concepts that forward leaning customers might be interested in.

4.3.1 Snippet: Authentication

There are two ways to authenticate to Expel Workbench. The first is as a user with your password and MFA token, the second is with an API key. To authenticate as a user, you'll need to provide your password and your 2FA code.

```
import getpass
from pyexclient import WorkbenchClient

print("Enter Username:")
username = input()
print("Enter Password:")
password = getpass.getpass()
print("2FA Code:")
code = input()

xc = WorkbenchClient('https://workbench.expel.io', username=username,
    password=password, mfa_code=code)
```

To authenticate with an api token:

```
xc = WorkbenchClient('https://workbench.expel.io', token='apitoken')
```

4.3.2 Snippet: List all open remediation actions

Sometimes it can be useful to review all open remediation actions. This is a snippet of [Open Remediation Actions](#) will list all remediation actions that are not currently completed or closed. You can optionally specify a date range to scope the search too.

Listing 1: examples/open_remediation_actions.py

```
# Start documentation snippet

# Search remediation actions where the status is not equal to CLOSED or COMPLETED,
    and optionally it was created within the window of start_date and end_date.
# start and end date's can be None in which case the search will look at all
    remediation actions.
for rem in xc.remediation_actions.search(created_at=window(start_date, end_date),
    status=neq('COMPLETED', 'CLOSED')):
    # Calculate the number of days since the remediation action was created.
    since = (datetime.datetime.now() - datetime.datetime.strptime(rem.created_at, "%Y-
    %m-%dT%H:%M:%S.%fZ")).days
    print(f'{rem.action} created {rem.created_at} ({since} days ago) has status {rem.
    status} and the comment is "{rem.comment if rem.comment else ""}"')

    # Count the number of assets we have
    count = xc.remediation_action_assets.search(relationship('remediation_action.id',
    rem.id)).count()
    print(f'Found {count} remediation action assets for remediation action {rem.id}')

    # Now print all the assets we have for the parent action
    for asset in xc.remediation_action_assets.search(relationship('remediation_action.
    id', rem.id)):
```

(continues on next page)

(continued from previous page)

```
print(f'\t{asset.status} - {asset.asset_type} - {asset.value}')
# End documentation snippet

__name__ == '__main__':
```

4.3.3 Snippet: Return device name of security device ID

Working with identifiers can be helpful, but also hard to mentally keep track of at times. This example is a simple function to return the human readable name of a security device ID

```
def security_device_to_name(xc, device_id):
    device = xc.security_devices.get(id=device_id)
    if device:
        return device.name
    return None

device_id = "158b031d-87f8-4c42-80ee-f9fb15796360"
device_name = security_device_to_name(xc, device_id)
```

4.3.4 Snippet: Return devices with a specific investigative action support

Before starting an investigative action, it is sometimes helpful to look up the capabilities of your onboarded devices to make sure you have a device that supports a particular investigative action. This example will use Capabilities to look for *ENDPOINT* devices, such as EDR or antivirus devices, that support the Query Domain capability.

```
def get_query_domain_devices(xc):
    endpoint = xc.capabilities().get("ENDPOINT")
    if endpoint:
        query_domain = endpoint.get("query_domain")
        if query_domain:
            security_devices = query_domain.get("security_devices")
            if security_devices:
                return security_devices
    return None

query_domain_devices = get_query_domain_devices(xc)
```

4.3.5 Snippet: Listing investigations

Iterate over all the investigations and print their title and status.

```
for inv in xc.investigations:
    s = "Investigation ID: {inv_id} Title: {inv_title} Status: {inv_status}"
    status = "OPEN" if inv.decision is not None else "CLOSED"
    print(s.format(inv_id=inv.id, inv_title=inv.title, inv_status=status))
```

4.3.6 Snippet: List comments

List all comments, displaying when they were created and by which user.

```
for comment in xc.comments:
    s = "[{ts}] {cmt} - {user}"
    print(s.format(ts=comment.created_at, cmt=comment.comment, user=comment.created_
↳by.display_name))
```

4.3.7 Snippet: create comment

Create a comment and associate it with an investigation.

```
comment = xc.comments.create(comment="Hello world!")
comment.relationship.investigation = 'my-investigation-id'
comment.save()
```

4.3.8 Snippet: Listing Investigative Actions

List investigative actions by type or capability name.

For example, listing all manual (human driven) investigative actions:

```
for inv_act in xc.investigative_actions.search(action_type='MANUAL'):
    print(inv_act)
```

Alternatively, you could search for all automatic actions to acquire a file like this:

```
for inv_act in xc.investigative_actions.search(capability_name='acquire_file'):
    print(inv_act)
```

4.3.9 Snippet: Find top automatic Investigative Actions

Find the top 10 automatic investigative actions by number of times they are issued.

```
from collections import defaultdict

# Retrieve all automatic actions
actions = defaultdict(int)
for action in xc.investigative_actions.search(action_type='TASKABILITY'):
    actions[action.capability_name] += 1

# Sort and list top 10 actions
top_actions = sorted(actions.items(), key=lambda x: x[1], reverse=True)
top_actions[:10]
```

4.3.10 Snippet: Creating new investigation

Create a new investigation in Workbench.

```
inv = xc.investigations.create(title='My investigation title')
inv.save()
```

4.3.11 Snippet: List open investigation

List open investigations in Workbench.

```
from pyexclient.workbench import notnull

for inv in xc.investigations.search(decision=notnull()):
    print(inv)
```

4.3.12 Snippet: Close an investigation

Update an investigation's state by closing it. Note that setting an investigation's decision to anything other than None will close it.

```
with xc.investigations.get(id='my-investigation-id') as inv:
    inv.decision = "FALSE_POSITIVE"
    inv.close_comment = "This is a false positive."
```

4.3.13 Snippet: Creating findings for an incident

Create new investigative findings for an incident.

```
finding = xc.investigation_findings.create(
    rank = 1, # The order in which this finding will appear in Workbench
    title = "Where else is it?", # Title of the finding
    finding = "We found it **EVERYWHERE!**", # Markdown body for the finding
)
finding.relationship.investigation = 'my-investigation-id'
finding.save()
```

4.3.14 Snippet: Modify investigation findings

Modify findings text for an investigation.

```
with xc.investigation_findings.get(id='my-finding-id') as finding:
    finding.finding = "Updated: Turns out it wasn't _everywhere_..."
```

4.3.15 Snippet: Create an investigative action and poll for completion

Create “auto” investigative actions, using our tasking framework. This example will use the Query Logs investigative action. After creating the investigative action shows how to download the results. Assumes the results completed. Requires knowing the following values: - Investigation ID - A user ID, can also use customer ID in place of a specific user - Vendor device ID to task - Input arguments to the “task” defined per capability - Query that is specific to the SIEM we are talking too. This example works on Sumo Logic.

```
import time
from io import BytesIO
from datetime import datetime, timedelta

input_args = dict(
```

(continues on next page)

(continued from previous page)

```

    query="evil.exe",
    start_time=(datetime.now() - timedelta(days=1)).isoformat(),
    end_time=datetime.now().isoformat(),
)

action = xc.create_auto_inv_action(
    vendor_device_id='my-vendor-device-id',
    capability_name='query_logs',
    input_args=input_args,
    title="Query Sumo Logic for some logs",
    reason="I want to see if I can find some logs...",
    investigation_id='my-investigation-id'
)

while action.status == 'RUNNING':
    print("Waiting for results...")
    time.sleep(3)
    action = xc.investigative_actions.get(id=action.id)

if action.status == 'READY_FOR_ANALYSIS':
    results = io.BytesIO()
    action.download(results)
    results.seek(0)

    with open("results.json", 'wb') as fd:
        fd.write(results.read())
    print("Got results! Saved to results.json")
else:
    print("No results... {status}".format(status=action.status))

```

4.3.16 Snippet: Upload investigative data

While uncommon, it can happen that a customer has access to logs or data that we don't. In that case it's important Expel gain access to that data to help complete an investigation. In this example we'll show how you can upload arbitrary to an investigation.

```

# create an manual investigative action
action = xc.investigative_actions.create(
    action_type='MANUAL',
    title='Upload file',
    reason='To provide a file to Expel for analysis',
    status='READY_FOR_ANALYSIS',
)
action.save()

# read an upload a file
fname = 'evil.exe'
with open(fname, 'rb') as fd:
    action.upload(fname, fd.read())

```

4.3.17 Snippet: Return Expel Alerts closed as PUP/PUA

Expel Alert close decisions can be helpful to identify certain types of alerts in your organization. This example will find alerts with a close decision of PUP/PUA.

```
for ea in xc.expel_alerts.search(close_reason='PUP_PUA') :
    print(ea)
```

4.3.18 Snippet: Interacting with Expel hunting investigations

Note: Hunting investigations are specific to the Expel Hunting service and available to those who have purchased this option.

```
for inv in xc.investigations.search(source_reason="HUNTING") :
    print(inv)
```

4.3.19 Snippet: Return devices with a specific investigative action support

Before starting an investigative action, it is sometimes helpful to look up the capabilities of your onboarded devices to make sure you have a device that supports a particular investigative action. This example will use Capabilities to look for *ENDPOINT* devices, such as EDR or antivirus devices, that support the Query Domain capability.

```
capabilities = xc.capabilities()
supported = capabilities.get('ENDPOINT', {}).get('query_domain', {}).get('security_
↪ devices')
if supported:
    print("Devices supporting this capability: ", supported)
else:
    print("No devices support this capability")
```

4.3.20 Snippet: Close a remediation action as completed

Update a remediation action as completed, and close it in Expel Workbench.

```
with xc.remediation_actions.get(id='remediation_action_id') as action:
    action.status = 'COMPLETED'
    action.close_reason = 'We remediated this sytem.'
```

4.3.21 Script: Export Expel Alerts with Evidence Fields

See the example script [Export Expel Alert Evidence](#). This script will write a CSV containing timestamp of alert, expel alert name, vendor name, and associated evidence fields.

4.3.22 Script: Poll for new Incidents

See the example script [Poll For New Incidents](#). This script will poll Expel Workbench for any incidents created in the past five minutes.

4.3.23 Script: Sync to JIRA

See the example script [Jira Sync](#). This script will sync the following to JIRA from Expel Workbench:

- Investigative Actions details and outcome as sub tasks
- Investigation description, lead alert
- Investigative comments
- Incident findings
- Investigation status closed/opened

4.3.24 Script: Poll unhealthy devices

See the example script [Poll For Unhealthy Devices](#). This script will poll Expel Workbench for any devices marked unhealthy in the past five minutes.

4.3.25 Script: Poll for investigation / incident changes

See the example script [Poll For Investigaiton / Incident updates](#). This script will poll Expel Workbench for any updates to investigations or incidents in the past five minutes.

4.3.26 Script: Pretty Print Lead Expel Alert Evidence

See the example script [Pretty Print Lead Expel Alert Evidence](#). This script will pretty print the Expel Alert details along with all correlated vendor evidences.

4.3.27 Notebook: Metrics notebook

The example metrics notebook [Expel Metrics Example](#). Shows a few different ways you can interact with Expel data to draw some interesting insights.

Workbench API Reference

class `pyexclient.workbench.ActivityMetrics` (*data, conn, included=None*)

Bases: `pyexclient.workbench.ResourceInstance`

Defines/retrieves expel.io activity_metric records

Resource type name is **activity_metrics**.

Example JSON record:

```
{
    'activity': 'string',
    'created_at': '2019-01-15T15:35:00-05:00',
    'data': {},
    'ended_at': '2019-01-15T15:35:00-05:00',
    'referring_url': 'https://company.com/',
    'started_at': '2019-01-15T15:35:00-05:00',
    'updated_at': '2019-01-15T15:35:00-05:00',
    'url': 'https://company.com/'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Activity Allows: "", null	activity	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Additional data about the activity Allows: null: no-sort	data	object	Y	N
Date/Time of when the activity concluded	ended_at	string	Y	N
Referring url Allows: "", null	refer-ring_url	string	Y	N
Date/Time of when the activity started	started_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Url Allows: "", null	url	string	Y	N
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Expel alerts	expel_alert	<i>ExpelAlerts</i>	N	Y
Investigations	investiga-tion	<i>Investigation</i>	N	Y
Security devices	secu-rity_device	<i>SecurityDevices</i>	N	Y
Defines/retrieves expel.io actor records	up-dated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**Actors** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io actor records

Resource type name is **actors**.

Example JSON record:

```
{'actor_type': 'system', 'created_at': '2019-01-15T15:35:00-05:00', 'display_name': 'string', 'is_expel': True, 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribut	Re-lationship
Actor type Restricted to: “system”, “user”, “organization”, “api”, “service”: immutable	actor_type	any	Y	N
Created timestamp: readonly	created_at	string	Y	N
Display name Allows: “”, null	display_name	string	Y	N
Meta: readonly, no-sort, no-filter	is_expel	boolean	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
investigative actions	analysis_assigned_investigative_actions	<i>InvestigativeActions</i>	N	Y
Expel alerts	as-signed_expel_alerts	<i>ExpelAlerts</i>	N	Y
Investigations	as-signed_investigations	<i>Investigations</i>	N	Y
investigative actions	as-signed_investigative_actions	<i>InvestigativeActions</i>	N	Y
Organization to resilience actions	as-signed_organization_resilience_actions	<i>OrganizationResilienceActions</i>	N	Y
Organization to resilience actions	as-signed_organization_resilience_actions_list	<i>OrganizationResilienceActions</i>	N	Y
Remediation actions	as-signed_remediation_actions	<i>RemediationActions</i>	N	Y
Defines/retrieves expel.io remediation_action_setting records	auto-mate_opt_in_for_remediation_action_setting	<i>RemediationActionSettings</i>	N	Y
Defines/retrieves expel.io actor records	child_actors	<i>Actors</i>	N	Y
Defines/retrieves expel.io organization records	child_organizations	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
investigative actions	current_assigned_investigative_actions_classification	<i>InvestigativeActions</i>	N	Y
User Notification Preferences	notification_preferences	<i>NotificationPreferences</i>	N	Y
Defines/retrieves expel.io organization records	organization	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	parent_actor	<i>Actors</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y
User accounts	user_account	<i>UserAccounts</i>	N	Y

class pyexclient.workbench.**ApiKeys** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io api_key records. These can only be created by a user and require an OTP token.

Resource type name is **api_keys**.

Example JSON record:

```
{
    'access_token': 'string',
    'active': True,
    'assignable': True,
    'created_at': '2019-01-15T15:35:00-05:00',
    'display_name': 'string',
    'name': 'string',
    'realm': 'public',
    'restrictions': [],
    'role': 'expel_admin',
    'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Only upon initial api key creation (POST), contains the bearer api key token required for api access.: readonly, no-sort, no-filter	access_token	string	Y	N
Active Allows: null	active	boolean	Y	N
Can Api key be assigned items (e.g. investigations, etc)	assignable	boolean	Y	N
Created timestamp: readonly	created_at	string	Y	N
Display name Allows: null	display_name	string	Y	N
Missing Description	name	string	Y	N
Realm in which the api key can be used. Restricted to: “public”, “internal”	realm	any	Y	N
Special authorization restrictions for this api key	restrictions	array	Y	N
Role Restricted to: “expel_admin”, “expel_analyst”, “organization_admin”, “organization_analyst”, “system”, “anonymous”, “restricted”	role	any	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Defines/retrieves expel.io actor records	updated_by	Actors	N	Y

class pyexclient.workbench.**AssemblerImages** (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

Assembler Images

Resource type name is **assembler_images**.

Example JSON record:

```
{
    'created_at': '2019-01-15T15:35:00-05:00',
    'hash_md5': 'string',
    'hash_sha1': 'string',
    'hash_sha256': 'string',
    'platform': 'VMWARE',
    'release_date': '2019-01-15T15:35:00-05:00',
    'size': 100,
    'updated_at': '2019-01-15T15:35:00-05:00',
    'version': 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Created timestamp: readonly	cre-ated_at	string	Y	N
Assembler image md5 hash Allows: null	hash_md5	string	Y	N
Assembler image sh1 hash Allows: null	hash_sha1	string	Y	N
Assembler image sha256 hash Allows: null	hash_sha256	string	Y	N
Platform Restricted to: “VMWARE”, “HYPERV”, “AZURE”, “AMAZON”	platform	any	Y	N
Assembler image release date Allows: null	re-lease_date	string	Y	N
Assembler image size Allows: null	size	number	Y	N
Last Updated timestamp: readonly	up-dated_at	string	Y	N
Assembler image version Allows: “”, null	version	string	Y	N
Defines/retrieves expel.io actor records	cre-ated_by	Actors	N	Y
Defines/retrieves expel.io actor records	up-dated_by	Actors	N	Y

class pyexclient.workbench.**Assemblers** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Assemblers

Resource type name is **assemblers**.

Example JSON record:

```
{
    'connection_status': 'Never Connected',
    'connection_status_updated_at': '2019-01-15T15:35:00-05:00',
    'created_at': '2019-01-15T15:35:00-05:00',
    'deleted_at': '2019-01-15T15:35:00-05:00',
    'install_code': 'string',
    'lifecycle_status': 'New',
    'lifecycle_status_updated_at': '2019-01-15T15:35:00-05:00',
    'location': 'string',
    'name': 'string',
    'status': 'string',
    'status_updated_at': '2019-01-15T15:35:00-05:00',
    'updated_at': '2019-01-15T15:35:00-05:00',
    'vpn_ip': 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Assembler connection status Restricted to: “Never Connected”, “Connection Lost”, “Connected to Provisioning”, “Connected to Service” Allows: null	connection_status	any	Y	N
Assembler connection status update timestamp: readonly	connection_status_updated_at	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Deleted At timestamp Allows: null	deleted_at	string	Y	N
Assembler install code Allows: null	install_code	string	Y	N
Assembler life cycle status Restricted to: “New”, “Authorized”, “Transitioning”, “Transitioned”, “Transition Failed”, “Configuring”, “Configuration Failed”, “Active”, “Inactive”, “Deleted” Allows: null	lifecycle_status	any	Y	N
Assembler lifecycle status update timestamp: readonly	lifecycle_status_updated_at	string	Y	N
Location of assembler Allows: “”, null	location	string	Y	N
Name of assembler Allows: “”, null	name	string	Y	N
Assembler status Restricted to: “not_yet_connected”, “connection_lost”, “connected”, “error”, “configuring”, “transition_failed”, “configuration_failed”, “active”, “inactive”, “deleted” Allows: “”, null: readonly	status	string	Y	N
Assembler last status update timestamp: readonly	status_updated_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Assembler VPN ip address Allows: null	vpn_ip	string	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Security devices	security_devices	SecurityDevices	N	Y
Defines/retrieves expel.io actor records	updated_by	Actors	N	Y
Vendor alerts	vendor_alerts	VendorAlerts	N	Y

```
class pyexclient.workbench.BaseResourceObject (cls, content=None, api_type=None, conn=None)
```

Bases: object

count ()

Return the number of records in a JSON API response. You can get the count for entries returned by filtering, or you can request the count of the total number of resource instances. The total number of resource instances does not require paginating overall entries.

Returns The number of records in a JSON API response

Return type `int`

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> print("Investigation Count: ", xc.investigations.filter_by(customer_
↳ id='1').count())
>>> print("Investigation Count: ", xc.investigations.count())
```

create (***kwargs*)

Create a ResourceInstance object that represents some Json API resource.

Parameters *kwargs* (*dict*) – Attributes to set on the new JSON API resource.

Returns A ResourceInstance object that represents the JSON API resource type requested by the dev.

Return type *ResourceInstance*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> i = xc.investigations.create(title='Peter: new investigation 1',
↳ relationship_customer=CUSTOMER_GUID, relationship_assigned_to_
↳ actor=PETER_S)
>>> i.save()
```

filter_by (***kwargs*)

Issue a JSON API call requesting a JSON API resource is filtered by some set of attributes, id, limit, etc.

Parameters *kwargs* (*dict*) – The base JSON API resource type

Returns A BaseResourceObject object

Return type *BaseResourceObject*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> for inv in xc.investigations.filter_by(customer_id='1'):
>>>     print(inv.title)
```

get (***kwargs*)

Request a JSON api resource by id.

Parameters *id* (*str*) – The GUID of the resource

Returns A BaseResourceObject object

Return type *BaseResourceObject*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> inv = xc.investigations.get(id=investigation_guid)
>>> print(inv.title)
```

one_or_none()

Return one record from a JSON API response or None if there were no records.

Returns A BaseResourceObject object

Return type *BaseResourceObject*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> inv = xc.investigations.filter_by(customer_id=CUSTOMER_GUID).one_or_
↳ none()
>>> print(inv.title)
```

search(*args, **kwargs)

Search based on a set of criteria made up of operators and attributes.

Parameters

- **args** (*tuple*) – Operators of relationship|limit|include|sort
- **kwargs** (*dict*) – Fields and values to search on

Returns A BaseResourceObject object

Return type *BaseResourceObject*

Examples:

```
>>> # field filter
>>> for inv in xc.investigations.search(customer_id=CUSTOMER_GUID):
>>>     print(inv.title)
```

```
>>> # operator field filter
>>> for inv in xc.investigations.search(customer_id=CUSTOMER_GUID,
↳ created_at=gt("2020-01-01")):
>>>     print(inv.title)
```

```
>>> # relationship field filter
>>> for inv in xc.investigations.search(customer_id=CUSTOMER_GUID,
↳ relationship("investigative_actions.created_at", gt("2020-01-01"))):
>>>     print(inv.title)
```

class pyexclient.workbench.**CommentHistories** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io comment_history records

Resource type name is **comment_histories**.

Example JSON record:

```
{'action': 'CREATED', 'created_at': '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Comment history action Restricted to: “CREATED”, “UPDATED”, “DELETED” Allows: null	action	any	Y	N
Created timestamp: readonly	cre-ated_at	string	Y	N
Comment history details Allows: null: no-sort	value	object	Y	N
Defines/retrieves expel.io comment records	com-ment	<i>Comments</i>	N	Y
Defines/retrieves expel.io actor records	cre-ated_by	<i>Actors</i>	N	Y
Investigations	inves-tiga-tion	<i>Investigations</i>	N	Y

class pyexclient.workbench.**Comments** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io comment records

Resource type name is **comments**.

Example JSON record:

```
{'comment': 'string', 'created_at': '2019-01-15T15:35:00-05:00', 'updated_at':  
→ '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Comment: markdown	comment	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io com-ment_history records	com-ment_histories	<i>CommentHistories</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Investigations	investigation	<i>Investigations</i>	N	Y
Defines/retrieves expel.io organiza-tion records	organization	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**Configurations** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io configuration records

Resource type name is **configurations**.

Example JSON record:

```
{
  'created_at': '2019-01-15T15:35:00-05:00',
  'default_value': 'object',
  'description': 'string',
  'is_override': True,
  'key': 'string',
  'metadata': {},
  'title': 'string',
  'updated_at': '2019-01-15T15:35:00-05:00',
  'validation': {},
  'value': 'object',
  'visibility': 'EXPEL',
  'write_permission_level': 'EXPEL'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tion-ship
Created timestamp: readonly	created_at	string	Y	N
Default configuration value Allows: null: read-only, no-sort	de-fault_value	any	Y	N
Description of configuration value Allows: “”, null: readonly, markdown	description	string	Y	N
Configuration value is an override: readonly	is_override	boolean	Y	N
Configuration key: readonly	key	string	Y	N
Configuration metadata Allows: null: readonly, no-sort	metadata	object	Y	N
Title of configuration value Allows: “”, null: readonly	title	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Configuration value validation Allows: null: readonly, no-sort	validation	object	Y	N
Configuration value Allows: null: no-sort	value	any	Y	N
Configuration visibility Restricted to: “EX-PEL”, “ORGANIZATION”, “SYSTEM”	visibility	any	Y	N
Write permission required Restricted to: “EX-PEL”, “ORGANIZATION”, “SYSTEM”	write_permission_level	any	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Defines/retrieves expel.io actor records	updated_by	Actors	N	Y

class pyexclient.workbench.ContextCategories (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

Groups for organizing context variables outside of any specific use case

Resource type name is **context_categories**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'description': 'string', 'image':  
→ 'string', 'name': 'string', 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tion-ship
Created timestamp: readonly	cre- ated_at	string	Y	N
A description for this context category Allows: null	descrip- tion	string	Y	N
Filename for the image used in the context cate- gory card in Workbench: immutable	image	string	Y	N
Unique name of this context category	name	string	Y	N
Last Updated timestamp: readonly	up- dated_at	string	Y	N
Reusable strongly typed context variables which can be referenced by other features	con- text_variables	<i>ContextVariables</i>	N	Y
Defines/retrieves expel.io actor records	cre- ated_by	<i>Actors</i>	N	Y
Defines/retrieves expel.io organization records	organiza- tion	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	up- dated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.ContextCategoryDefaults (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

A set of global seed categories which will be added for each new organization

Resource type name is **context_category_defaults**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'description': 'string', 'image':  
→ 'string', 'name': 'string', 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Created timestamp: readonly	cre-ated_at	string	Y	N
A description for this context category Allows: null	descrip-tion	string	Y	N
Filename for the image used in the context category card in Workbench	image	string	Y	N
Unique name of this context category	name	string	Y	N
Last Updated timestamp: readonly	up-dated_at	string	Y	N
Defines/retrieves expel.io actor records	cre-ated_by	<i>Actors</i>	N	Y
Defines/retrieves expel.io actor records	up-dated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.ContextLabelActionHistories (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io context_label_action_history records

Resource type name is **context_label_action_histories**.

Example JSON record:

```
{'action': 'CREATED', 'action_type': 'ALERT_ON', 'created_at': '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Context label action history Restricted to: “CREATED”, “UPDATED”, “DELETED” Allows: null	action	any	Y	N
Action type of source parent remediation action Restricted to: “ALERT_ON”, “ADD_TO”, “SUPPRESS”	ac-tion_type	any	Y	N
Created timestamp: readonly	cre-ated_at	string	Y	N
Context label action history details (contains important fields that changed) Allows: null: no-sort	value	object	Y	N
Defines/retrieves expel.io context_label records	con-text_label	<i>ContextLabelNs</i>	N	Y
Defines/retrieves expel.io context_label_action records	con-text_label_action	<i>ContextLabelActionNs</i>	N	Y
Defines/retrieves expel.io actor records	cre-ated_by	<i>Actors</i>	N	Y
Investigations	investiga-tion	<i>InvestigationNs</i>	N	Y

class pyexclient.workbench.ContextLabelActions (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io context_label_action records

Resource type name is **context_label_actions**.

Example JSON record:

```
{'action_type': 'ALERT_ON', 'created_at': '2019-01-15T15:35:00-05:00', 'expel_
↪severity_threshold': 'CRITICAL', 'expel_signature_id': 'string', 'updated_at':
↪'2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
What action to take Restricted to: “ALERT_ON”, “ADD_TO”, “SUPPRESS”	action_type	any	Y	N
Created timestamp: readonly	created_at	string	Y	N
Restricted to: “CRITICAL”, “HIGH”, “MEDIUM”, “LOW”, “TESTING”, “TUNING” Allows: null	expel_severity_threshold	any	Y	N
Expel alert signature Allows: “”, null	expel_signature_id	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io context_label records	context_label	<i>ContextLabels</i>	N	Y
Defines/retrieves expel.io context_label_action_history records	context_label_action_histories	<i>ContextLabelActionHistories</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Investigations	investigation	<i>Investigations</i>	N	Y
Timeline Entries	time-line_entries	<i>TimelineEntries</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**ContextLabelHistories** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io context_label_history records

Resource type name is **context_label_histories**.

Example JSON record:

```
{'action': 'CREATED', 'created_at': '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Re-lation-ship
Context label history action Restricted to: “CREATED”, “UPDATED”, “DELETED”, “ASSIGNED_TAG_CREATED”, “ASSIGNED_TAG_DELETED” Allows: null	ac-tion	any	Y	N
Created timestamp: readonly	cre-ated_at	string	Y	N
Context label history details (contains important fields that changed) Allows: null: no-sort	value	object	Y	N
Defines/retrieves expel.io context_label records	con-text_label	<i>ContextLabels</i>	N	Y
Defines/retrieves expel.io actor records	cre-ated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.ContextLabelTags (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io context_label_tag records

Resource type name is **context_label_tags**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'description': 'string', 'metadata':
→ {}, 'tag': 'string', 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Re-lation-ship
Created timestamp: readonly	created_at	string	Y	N
Description Allows: null, ""	description	string	Y	N
Metadata about the context label tag Allows: null: no-sort	metadata	object	Y	N
Tag	tag	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io con-text_label records	context_labels	<i>ContextLabels</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Defines/retrieves expel.io organi-zation records	organization	<i>Organizations</i>	N	Y
Remediation action assets	remedia-tion_action_assets	<i>RemediationActionAssets</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.ContextLabels (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io context_label records

Resource type name is **context_labels**.

Example JSON record:

```
{
    'created_at': '2019-01-15T15:35:00-05:00',
    'definition': {},
    'description': 'string',
    'ends_at': '2019-01-15T15:35:00-05:00',
    'initial_edit_at': '2019-01-15T15:35:00-05:00',
    'metadata': {},
    'resolved_definition': {},
    'review_status': 'APPROVED',
    'starts_at': '2019-01-15T15:35:00-05:00',
    'title': 'string',
    'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description
Created timestamp: readonly
Definition: no-sort
Description Allows: null, ""
Date/Time of when the context_label should end being tested Allows: null
Date/Time of when the drawer was first opened to create the context label Allows: null
Metadata about the context label Allows: null: no-sort
Definition where all variables are replaced with their current values Allows: null: readonly, no-sort
Current status of the review process Restricted to: "APPROVED", "REVIEW_REQUESTED", "CHANGES_REQUESTED", "DECLINED"
Date/Time of when the context_label should start being tested
Title Allows: null, ""
Last Updated timestamp: readonly
Defines/retrieves expel.io context_label_action records

```
class pyexclient.workbench.ContextVariableHistories (data, conn, included=None)
    Bases: pyexclient.workbench.ResourceInstance
```

Defines/retrieves expel.io context_variable_history records

Resource type name is **context_variable_histories**.

Example JSON record:

```
{'action': 'string', 'created_at': '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Context variable history action Restricted to: "CREATED", "UPDATED", "DELETED"	action	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Context variable history details Allows: null: no-sort	value	object	Y	N
Reusable strongly typed context variables which can be referenced by other features	context_variable	<i>ContextVariables</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Defines/retrieves expel.io organization records	organization	<i>Organizations</i>	N	Y

class pyexclient.workbench.**ContextVariables** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Reusable strongly typed context variables which can be referenced by other features

Resource type name is **context_variables**.

Example JSON record:

```
{  'context_type': 'string',
  'created_at': '2019-01-15T15:35:00-05:00',
  'description': 'string',
  'is_array': True,
  'name': 'string',
  'surface_context': True,
  'updated_at': '2019-01-15T15:35:00-05:00',
  'value': 'object',
  'value_type': 'cidr_block'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
One of a few common types for context variables or other Restricted to: "cidr_block", "domain", "email_address", "file_hash", "hostname", "ip_address", "other", "port", "url", "username": immutable	context_type	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Optional description of this context variable Allows: null	description	string	Y	N
Whether or not the value of this context variable is an array: immutable	is_array	boolean	Y	N
Name of this context variable	name	string	Y	N
Whether or not to surface this context variable in Workbench	surface_context	boolean	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Value of this context variable: allowStringOperators, no-sort	value	any	Y	N
Value type of this context variable Restricted to: "cidr_block", "integer", "ip_address", "regex", "string": immutable	value_type	any	Y	N
Groups for organizing context variables outside of any specific use case	context_categories	<i>ContextCategories</i>	N	Y
Defines/retrieves expel.io context_label records	context_labels	<i>ContextLabels</i>	N	Y
Defines/retrieves expel.io context_variable_history records	context_variable_histories	<i>ContextVariableHistories</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Historical event log for each note model	note_histories	<i>Notes</i>	N	Y
A model for tying a message to a specific context variable or term for a specified period of time	notes	<i>Notes</i>	N	Y
Defines/retrieves expel.io organization records	organization	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.Detections (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

How we determine security-relevant data for analyst review

Resource type name is **detections**.

Example JSON record:

```
{
    'author_type': 'string',
    'configuration_slugs': [],
    'created_at': '2019-01-15T15:35:00-05:00',
    'customer_context_tags': [],
```

(continues on next page)

(continued from previous page)

```
'description': 'string',  
'engine': 'string',  
'logic_blob': 'string',  
'name': 'string',  
'priority': 100,  
'severity': 'string',  
'status': 'string',  
'supported_tech': [],  
'tags': [],  
'test_blob': 'string',  
'unique_on': [],  
'unique_within': 'string',  
'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
The author of this detection Allows: "", null	author_type	string	Y	N
A list of configuration tags used in the logic of this detection: no-filter, no-sort	configuration_slugs	array	Y	N
The time this detection was created Allows: null	created_at	string	Y	N
A list of customer context tags used in the logic of this detection: no-filter, no-sort	customer_context_tags	array	Y	N
What this detection is looking for Allows: "", null	description	string	Y	N
The parent detection engine Allows: "", null	engine	string	Y	N
A JSON formatted blob of Josie detection logic Allows: "", null	logic_blob	string	Y	N
The name of the detection Allows: "", null	name	string	Y	N
The order in which Josie applies this detection to security alerts, 0 being a higher priority Allows: null	priority	number	Y	N
The potential impact of detected incidents Allows: "", null	severity	string	Y	N
The production status of this detection Allows: "", null	status	string	Y	N
The technology that this detection supports	supported_tech	array	Y	N
A list of tags which may affect upstream behavior: no-filter, no-sort	tags	array	Y	N
A JSON formatted list of conditions (vendor alerts) that trigger this detection, in turn creating an Expel alert Allows: "", null	test_blob	string	Y	N
A list of Josie expressions that make this alert unique: no-filter, no-sort	unique_on	array	Y	N
The time period in which this alert is unique Allows: "", null	unique_within	string	Y	N
The last time this detection was updated Allows: null	updated_at	string	Y	N
Detection categories	expel_alert_categories	ExpelDetectionCategories	N	Y
Detection categories	expel_response_categories	ExpelDetectionCategories	N	Y
Detection categories	expel_triage_categories	ExpelDetectionCategories	N	Y

Defines/retrieves expel.io organization records	organizations	Organization	N	Y

class pyexclient.workbench.Digests (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

Digests

Resource type name is **digests**.

Example JSON record:

```
{'email': 'name@company.com', 'schedule': 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Rela-tionship
Email of the user, overwritten by the API during creation Allows: null, ""	email	string	Y	N
Missing Description	sched-ule	string	Y	N
Defines/retrieves expel.io organization records	organi-zation	Organizations	N	Y
User accounts	user_account	UserAccounts	N	Y

class pyexclient.workbench.**EngagementManagers** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io engagement_manager records

Resource type name is **engagement_managers**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'display_name': 'string', 'email':  
→ 'name@company.com', 'pagerduty_id': 'string', 'phone_number': 'string',  
→ 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Created timestamp: readonly	created_at	string	Y	N
Display name Allows: "", null	dis-play_name	string	Y	N
Email Allows: null	email	string	Y	N
Pagerduty ID Allows: null	pager-duty_id	string	Y	N
Phone number Allows: null	phone_number	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y

Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**FilesResourceInstance** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

download (*fd, fmt='json'*)

Download data from an investigative action. This can only be called on InvestigativeAction or Files objects.

Parameters

- **fd** (*File bytes object*) – Buffer to write response too.
- **fmt** (*str*) – The format to request the data be returned in.

Examples:

```
>>> import json
>>> import pprint
>>> import tempfile
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> with xc.investigative_actions.get(id=inv_act_id) as ia:
>>>     fd = tempfile.NamedTemporaryFile(delete=False)
>>>     ia.download(fd)
>>>     with open(fd.name, 'r') as fd:
>>>         pprint.pprint(json.loads(fd.read()))
```

class pyexclient.workbench.**Findings** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io finding records

Resource type name is **findings**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'rank': 100, 'title': 'string',  
↪ 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Created timestamp: readonly	created_at	string	Y	N
Seed Rank	rank	number	Y	N
Title Allows: "", null	title	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**Integrations** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io integration records

Resource type name is **integrations**.

Example JSON record:

```
{  
    'account': 'string',  
    'created_at': '2019-01-15T15:35:00-05:00',  
    'integration_meta': {},  
    'integration_type': 'pagerduty',  
    'last_tested_at': '2019-01-15T15:35:00-05:00',  
    'service_name': 'string',  
    'status': 'UNTESTED',  
    'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Service account identifier	account	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Needed information for integration type Allows: null: allow-StringOperators, no-sort	integration_meta	object	Y	N
Type of integration Restricted to: “pagerduty”, “slack”, “ticketing”, “service_now”, “teams”, “ops_genie”, “o365_reporting”, “palo_alto_networks_cxdr”, “webhook”: immutable	integration_type	any	Y	N
Last Successful Test Allows: null: readonly	last_test_string	string	Y	N
Service display name	service_name	string	Y	N
Integration status Restricted to: “UNTESTED”, “TEST_SUCCESS”, “TEST_FAIL”: readonly	status	any	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Organization secrets. Note - these requests must be in the format of /secrets/security_device-<guid>	secret	Secrets	N	Y
Defines/retrieves expel.io actor records	updated_by	Actors	N	Y

class pyexclient.workbench.InvestigationFindingHistories (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io investigation_finding_history records

Resource type name is **investigation_finding_histories**.

Example JSON record:

```
{'action': 'CREATED', 'created_at': '2019-01-15T15:35:00-05:00', 'updated_at':
↪ '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Investigation finding history action Restricted to: “CREATED”, “CHANGED”, “DELETED” Allows: null	action	any	Y	N
Created timestamp: readonly	created_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Investigation finding history details Allows: null: no-sort	value	object	Y	N
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Investigations	investigation	<i>Investigations</i>	N	Y
Investigation findings	investigation_finding	<i>InvestigationFindings</i>	N	Y
Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**InvestigationFindings** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Investigation findings

Resource type name is **investigation_findings**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'deleted_at': '2019-01-15T15:35:00-05:00', 'finding': 'string', 'rank': 100, 'title': 'string', 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Created timestamp: readonly	created_at	string	Y	N
Deleted At timestamp Allows: null	deleted_at	string	Y	N
Finding Allows: "", null: mark-down	finding	string	Y	N
Visualization Rank	rank	number	Y	N

Defines/retrieves expel.io actor records

class pyexclient.workbench.**InvestigativeActionsResourceInstance** (*data, conn, included=None*)

Bases: *pyexclient.workbench.FilesResourceInstance*

upload (*filename, fbytes, expel_file_type=None, file_meta=None*)

Upload data associated with an investigative action. Can only be called on InvestigativeAction objects.

Parameters

- **filename** (*str*) – Filename, this shows up in Workbench.
- **fbytes** (*bytes*) – A bytes string representing raw bytes to upload

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> with xc.investigative_actions.get(id=inv_act_id) as ia:
>>>     ia.upload('test.txt', b'hello world')
```

class pyexclient.workbench.**IpAddresses** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

IP addresses

Resource type name is **ip_addresses**.

Example JSON record:

```
{'address': 'string', 'created_at': '2019-01-15T15:35:00-05:00', 'updated_at':
↳ '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
IP Address: readonly	address	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
Expel alerts	destination_expel_alerts	<i>ExpelAlerts</i>	N	Y
Investigations	destination_investigations	<i>Investigation</i>	N	Y
Investigations	investigations	<i>Investigation</i>	N	Y
Expel alerts	source_expel_alerts	<i>ExpelAlerts</i>	N	Y

Defines/retrieves expel.io actor records	updated_by	<i>Actors</i>	N	Y
Vendor alerts	vendor_alerts	<i>VendorAlerts</i>	N	Y

class pyexclient.workbench.JsonApiRelationship (relationships: dict = None)

Bases: object

The object acts a helper to handle JSON API relationships. The object is just a dummy that allows for setting / getting attributes that are extracted from the relationship part of the JSON API response. Additionally, the object will allow for conversion to a JSON API compliant relationship block to include in a request.

to_relationship ()

Generate a JSON API compliant relationship section.

Returns A dict that is JSON API compliant relationship section.

Return type dict

class pyexclient.workbench.MitreTactics (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Mitre Tactics

Resource type name is **mitre_tactics**.

Example JSON record:

```
{'description': 'string', 'name': 'string', 'number_of_expel_detections': 100,
  ↳'number_of_vendor_detections': 100}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
The tactic description Allows: "", null	description	string	Y	N
The name of the tactic Allows: "", null	name	string	Y	N
The number of Expel-based detections in this category, based on the plugin_slugs filter	number_of_expel_detections	number	Y	N
The number of vendor-based detections in this category, based on the plugin_slugs filter	number_of_vendor_detections	number	Y	N

class pyexclient.workbench.**NistCategories** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io nist_category records

Resource type name is **nist_categories**.

Example JSON record:

```
{'created_at': '2019-01-15T15:35:00-05:00', 'function_type': 'IDENTIFY',

class pyexclient.workbench.**NoteHistories** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Historical event log for each note model

Resource type name is **note_histories**.

Example JSON record:

```
{'action': 'string', 'created_at': '2019-01-15T15:35:00-05:00', 'value': {}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Whether this is a create, update, or delete event Restricted to: “CREATED”, “UPDATED”, “DELETED”	action	string	Y	N
Created timestamp: readonly	created_at	string	Y	N
Complete state at the time of a create or delete event or the state changes for an update event: no-sort	value	object	Y	N
Reusable strongly typed context variables which can be referenced by other features	context_variable	<i>ContextVariables</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y
A model for tying a message to a specific context variable or term for a specified period of time	note	<i>Notes</i>	N	Y
Defines/retrieves expel.io organization records	organization	<i>Organizations</i>	N	Y

class pyexclient.workbench.**Notes** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

A model for tying a message to a specific context variable or term for a specified period of time

Resource type name is **notes**.

Example JSON record:

```
{
    'created_at': '2019-01-15T15:35:00-05:00',
    'ends_at': '2019-01-15T15:35:00-05:00',
    'message': 'string',
    'starts_at': '2019-01-15T15:35:00-05:00',
    'term': 'string',
    'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Created timestamp: readonly	cre-ated_at	string	Y	N
When the note should stop showing up as associated with context or global terms Allows: null	ends_at	string	Y	N
The message to display when a matching term or variable is highlighted	message	string	Y	N
When the note should begin showing up as associated with context or global terms	starts_at	string	Y	N
The term to match if and only if this is a global note Allows: null	term	string	Y	N
Last Updated timestamp: readonly	up-dated_at	string	Y	N
Reusable strongly typed context variables which can be referenced by other features	con-text_variable	<i>ContextVariables</i>	N	Y
Defines/retrieves expel.io actor records	cre-ated_by	<i>Actors</i>	N	Y
Historical event log for each note model	note_histories	<i>organizations</i>	N	Y
Defines/retrieves expel.io organization records	organi-zation	<i>Organizations</i>	N	Y
Defines/retrieves expel.io actor records	up-dated_by	<i>Actors</i>	N	Y

class pyexclient.workbench.**NotificationEvents** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Notification events

Resource type name is **notification_events**.

Example JSON record:

```
{
    'event_at': '2019-01-15T15:35:00-05:00',
    'event_name': 'string',
    'sent_notifications': [],
    'subject': {'display_name': 'string', 'meta': {}, 'model_id': 'string',
    ↪ 'model_type': 'string', 'parent_model_id': 'string', 'parent_model_type':
    ↪ 'string'}}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Timestamp of the event triggering the notification	event_at	string	Y	N
Name of the event triggering the notification	event_name	string	Y	N
Missing Description	sent_notifications	array	Y	N
Missing Description	subject	object	Y	N

class pyexclient.workbench.**NotificationPreferences** (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

User Notification Preferences

Resource type name is **notification_preferences**.

Example JSON record:

```
{'preferences': []}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Missing Description	preferences	array	Y	N
Defines/retrieves expel.io actor records	actor	Actors	N	Y

class pyexclient.workbench.**NotificationRules** (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

Notification rules

Resource type name is **notification_rules**.

Example JSON record:

```
{'condition_operator': 'string', 'conditionals': [], 'created_at': '2019-01-15T15:35:00-05:00', 'created_by': 'string', 'destinations': [], 'short_name': 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
The logical operator applied to the conditions Restricted to: “UNSPECIFIED”, “ALL_OF”, “ANY_OF”	condition_operator	string	Y	N
Rule conditions that must be met Allows: null: no-filter	conditionals	array	Y	N
The time this rule was created at Allows: null: read-only	created_at	string	Y	N
The actor who created this rule Allows: null, “”: readonly	created_by	string	Y	N
Rule destinations: no-filter	destinations	array	Y	N
The short name of the associated organization Allows: null, “”	short_name	string	Y	N
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Notification rule definitions	rule_definition	RuleDefinitions	N	Y
User accounts	user_account	UserAccounts	N	Y

class pyexclient.workbench.**OrganizationContacts** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io organization_contact records

Resource type name is **organization_contacts**.

Example JSON record:

```
{'contact_type': 'ORGANIZATION_CONTACT', 'created_at': '2019-01-15T15:35:00-05:00', 'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Contact Type Restricted to: “ORGANIZATION_CONTACT”, “SECURITY_DEVICE_CONTACT”	contact_type	any	Y	N
Created timestamp: readonly	created_at	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
User accounts	contact_user	<i>UserAccounts</i>	N	Y
Defines/retrieves expel.io actor records	created_by	<i>Actors</i>	N	Y

class pyexclient.workbench.ResourceInstance (data, conn, included=None)

Bases: object

Represents an instance of a base resource.

classmethod create (conn, **kwargs)

Create a new resource instance. Users need to call save() after create to write changes to the server.

Returns The updated resource instance

Return type [ResourceInstance](#)

Examples:

```
>>> i = xc.investigations.create(title='Peter: new investigation 1',  
↪relationship_customer=ORGANIZATION_ID, relationship_assigned_to_  
↪actor=ACTOR_ID)  
>>> i.save()
```

delete (prompt_on_delete=True)

Delete a resource instance.

Parameters **prompt_on_delete** (bool, optional) – True if user wants to be prompted when delete is issued and False otherwise., defaults to True.

Examples:

```
>>> inv = xc.investigations.get(id='a8bf9750-6a79-4415-9558-a56253606b9f')  
>>> inv.delete()
```

id

Retrieve the identifier for the resource instance.

Returns A GUID representing the unique instance

Return type str

Examples:

```
>>> for inv in xc.investigations.filter_by(status='OPEN'):
>>>     print("Investigation ID is %s" % inv.id)
```

save()

Write changes made to a resource instance back to the sever.

Returns The updated resource instance

Return type *ResourceInstance*

Examples:

```
>>> i = xc.investigations.create(title='Peter: new investigation 1',
↪relationship_customer=ORGANIZATION_ID, relationship_assigned_to_
↪actor=ACTOR_ID)
>>> i.save()
```

class pyexclient.workbench.**ReviewSummaries** (*data, conn, included=None*)

Bases: *pyexclient.workbench.ResourceInstance*

Defines/retrieves expel.io review summary records

Resource type name is **review_summaries**.

Example JSON record:

```
{
    'created_at': '2019-01-15T15:35:00-05:00',
    'data': {},
    'process_name': 'SOC_QC_REVIEW',
    'reporting_at': '2019-01-15T15:35:00-05:00',
    'task_type': 'ALERT_REVIEW',
    'total': '2019-01-15T15:35:00-05:00',
    'updated_at': '2019-01-15T15:35:00-05:00'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Created timestamp: readonly	created_at	string	Y	N
data for the specific review summary Allows: null: no-sort	data	object	Y	N
Process name Restricted to: “SOC_QC_REVIEW”, “PHISHING_AUDIT”, “SIMILARITY_REVIEW”	process_name	any	Y	N
Date used to report the counts Allows: null	reporting_at	string	Y	N
Task type Restricted to: “ALERT_REVIEW”, “INCIDENT_REVIEW”, “INVESTIGATION_REVIEW”	task_type	any	Y	N
Total number of errors for this date Allows: null	total	string	Y	N
Last Updated timestamp: readonly	updated_at	string	Y	N
Defines/retrieves expel.io actor records	created_by	Actors	N	Y
Defines/retrieves expel.io organization records	organization	Organizations	N	Y
Defines/retrieves expel.io actor records	updated_by	Actors	N	Y

class pyexclient.workbench.**RuleDefinitions** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

Notification rule definitions

Resource type name is **rule_definitions**.

Example JSON record:

```
{'conditions': [], 'event_definitions': [], 'owner_id': 'string', 'rule_action':
→ 'string', 'rule_definition_type': 'UNSPECIFIED', 'rule_model': 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	Attribute	Relationship
Allows: null: readonly, no-filter	conditions	array	Y	N
Allows: null: readonly, no-filter	event_definition	any	Y	N
The rule definition’s owner id Allows: null, “”	owner_id	string	Y	N
The rule definition’s action description	rule_action	string	Y	N
The type of rule definition (required) Restricted to: “UNSPECIFIED”, “ORG”, “OPS”, “INFRA”, “EM”, “USER”	rule_definition_type	any	Y	N
The name of the model being acted on	rule_model	string	Y	N

class pyexclient.workbench.**SamIIdentityProviders** (data, conn, included=None)

Bases: *pyexclient.workbench.ResourceInstance*

SAML Identity Providers

Resource type name is **saml_identity_providers**.

Example JSON record:

```
{'callback_uri': 'string', 'cert': 'string', 'entity_id': 'string', 'status':
  ↳ 'string'}
```

Below are valid filter by parameters:

Field Description	Field Name	Field Type	At-tribute	Relation-ship
Allows: ""	call-back_uri	string	Y	N
Allows: "", null	cert	string	Y	N
Allows: ""	entity_id	string	Y	N
Restricted to: "not_configured", "configured"	status	string	Y	N
Defines/retrieves expel.io organization records	organization	Organizations	N	Y

class pyexclient.workbench.**Secrets** (data, conn, included=None)

Bases: [pyexclient.workbench.ResourceInstance](#)

Organization secrets. Note - these requests must be in the format of /secrets/security_device-<guid>

Resource type name is **secrets**.

Example JSON record:

```
{
  'secret': {
    'device_info': {'access_id': '7b0a343c-860e-

```
class pyexclient.workbench.WorkbenchClient (base_url, username=None, password=None, mfa_code=None, token=None,  
                                             prompt_on_delete=True)
```

Bases: [pyexclient.workbench.WorkbenchCoreClient](#)

Instantiate a client that interacts with Workbench's API server.

If the developer specifies a username, then password and mfa_code are required inputs. If the developer has a token then username, password and mfa_code parameters are ignored.

Parameters

- **cls** ([WorkbenchClient](#)) – A Workbench class reference.
- **username** (*str or None*) – The username
- **password** (*str or None*) – The username's password
- **mfa_code** (*int or None*) – The multi factor authenticate code generated by google authenticator.
- **token** (*str or None*) – The bearer token of an authorized session. Can be used instead of username/password combo.

Returns An initialized, and authorized Workbench client.

Return type [WorkbenchClient](#)

capabilities (*customer_id: str*)

Get a list of capabilities for a given customer.

Parameters **customer_id** (*str*) – The customer ID

Examples:

```
>>> xc.workbench.capabilities("my-customer-guid-123")
```

create_auto_inv_action (*customer_id: str, security_device_id: str, created_by_id: str, capability_name: str, input_args: dict, title: str, reason: str, investigation_id: str = None, expel_alert_id: str = None*)

Create an automatic investigative action.

Parameters

- **customer_id** (*str*) – The customer ID
- **investigation_id** (*str*) – The investigation ID to associate the action with.
- **expel_alert_id** (*str*) – The expel alert id
- **security_device_id** (*str*) – The security device ID, to dispatch the task against.
- **created_by_id** (*str*) – The user ID that created the action
- **capability_name** (*str*) – The name of the capability we are running. Defined in classes <https://github.com/expel-io/taskabilities/tree/master/py/taskabilities/cpe/capabilities>, look at name class variable.
- **input_args** (*dict*) – The input arguments to the capability to run. Defined in classes <https://github.com/expel-io/taskabilities/tree/master/py/taskabilities/cpe/capabilities>, look at name class variable.
- **title** (*str*) – The title of the investigative action, shows up in Workbench.
- **reason** (*str*) – The reason for running the investigative action, shows up in Workbench.

Returns Investigative action response

Return type *InvestigativeActions*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> input_args = &#123;"user_name": 'willy.wonka@expel.io', 'time_range_
↳ start': '2019-01-30T14:00:40Z', 'time_range_end': '2019-01-30T14:45:40Z'&
↳ #125;
>>> o = xc.create_auto_inv_action(customer_guid, inv_guid, device_guid,
↳ user_guid, 'query_user', input_args, 'Query User', 'Getting user login_
↳ activity to determine if login is normal')
>>> print("Investigative Action ID: ", o.id)
```

create_manual_inv_action (*title: str, reason: str, instructions: str, investigation_id: str = None, expel_alert_id: str = None, security_device_id: str = None, action_type: str = 'MANUAL'*)

Create a manual investigative action.

Parameters

- **title** (*str*) – The title of the investigative action, shows up in Workbench.
- **reason** (*str*) – The reason for running the investigative action, shows up in Workbench.
- **instructions** (*str*) – The instructions for running the investigative action.
- **investigation_id** (*str*) – The investigation ID to associate the action with.
- **expel_alert_id** (*str*) – The expel alert id
- **security_device_id** (*str*) – The security device ID, to dispatch the task against.
- **action_type** (*str*) – The type of action that will be run.

Returns Investigative action response

Return type *InvestigativeActions*

Examples:

```
>>> xc = WorkbenchClient('https://workbench.expel.io', username=username,
↳ password=password, mfa_code=mfa_code)
>>> o = xc.create_manual_inv_action('title foo', 'reason bar',
↳ 'instructions blah')
>>> print("Investigative Action ID: ", o.id)
```

fetch_plugins()

Get a list of plugins.

Examples:

```
>>> xc.workbench.plugins()
```

```
class pyexclient.workbench.WorkbenchCoreClient (base_url, username=None, pass-
                                                word=None, mfa_code=None,
                                                token=None, retries=3,
                                                prompt_on_delete=True)
```

Bases: object

Instantiate a Workbench core client that provides just authentication and request capabilities to Workbench

If the developer specifies a username, then password and mfa_code are required inputs. If the developer has a token then username, password and mfa_code parameters are ignored.

Parameters

- **cls** (*WorkbenchClient*) – A Workbench class reference.
- **username** (*str or None*) – The username
- **password** (*str or None*) – The username's password
- **mfa_code** (*int or None*) – The multi factor authenticate code generated by google authenticator.
- **token** (*str or None*) – The bearer token of an authorized session. Can be used instead of username/password combo.

Returns An initialized, and authorized Workbench client.

Return type *WorkbenchClient*

login (*username, password, code*)

Authenticate as a human, this requires providing the 2FA code.

Parameters

- **username** (*str*) – The user's e-mail address.
- **password** (*str*) – The user's password.
- **code** (*str*) – The 2FA code

Returns The bearer token that allows users to call Workbench APIs.

Return type *str*

make_session()

Create a session with Workbench

class pyexclient.workbench.**base_filter** (*filter_value*)

Bases: *pyexclient.workbench.operator*

Base class for operators which take the form filter[field]. Can be used to create a basic one field filter, or subclassed by special operators for more complicated logic

class pyexclient.workbench.**contains** (*args)

Bases: *pyexclient.workbench.base_filter*

The contains operator is used to search for fields that contain a sub string..

Parameters **value** (*str*) – A substring to be checked against the value of a field.

Examples:

```
>>> for ea in xc.expel_alerts.search(close_comment=contains("foo")):
>>>     print("%s contains foo in the close comment" % ea.expel_name)
```

class pyexclient.workbench.**flag** (*filter_value*)

Bases: *pyexclient.workbench.operator*

Base class for operators which take the form flag[field]. Can be used to create a basic one field flag, or subclassed by special operators for more complicated logic

class pyexclient.workbench.**gt** (*value*)

Bases: *pyexclient.workbench.base_filter*

The gt (greater than) operator is used to search a specific field for values greater than X.

Parameters **value** (*str*) – The greater than value to be used in comparison during a search.

Examples:

```
>>> for ea in xc.expel_alerts.search(created_at=gt("2020-01-01")):
>>>     print("%s was created after 2020-01-01" % ea.expel_name)
```

class pyexclient.workbench.**include** (*include*)

Bases: *pyexclient.workbench.operator*

The include operator requests base resource names in a search. Cannot be used with sort or filtering. Passed as arg to search TODO enforce this constraint with asserts

Parameters **include** (*str*) – Include specific base resource names in request

Examples: >>> for ea in xc.expel_alerts.search(include('organization,created_by,updated_by')): >>> print(ea.organization)

pyexclient.workbench.**is_operator** (*value*)

Determine if a value implements an operator.

Parameters **value** (*object*) – The value to check

Returns *True* if value is an operator *False* otherwise.

Return type bool

class pyexclient.workbench.**isnull** (*filter_value=True*)

Bases: *pyexclient.workbench.base_filter*

The isnull operator is used to search for fields that are null.

Examples:

```
>>> for ea in xc.expel_alerts.search(close_comment=isnull()):
>>>     print("%s has no close comment" % ea.expel_name)
```

class pyexclient.workbench.**limit** (*limit*)

Bases: *pyexclient.workbench.operator*

The limit operator adds a limit to a search. Passed as arg to search

Parameters **limit** (*int*) – Limit the number of results returned.

class pyexclient.workbench.**lt** (*value*)

Bases: *pyexclient.workbench.base_filter*

The lt (less than) operator is used to search a specific field for values greater than X.

Parameters **value** (*str*) – The less than value to be used in comparison during a search.

Examples:

```
>>> for ea in xc.expel_alerts.search(created_at=lt("2020-01-01")):
>>>     print("%s was created before 2020-01-01" % ea.expel_name)
```

class pyexclient.workbench.**neq** (**args*)

Bases: *pyexclient.workbench.base_filter*

The neq operator is used to search for fields that are not equal to a specified value.

Parameters **value** (*str*) – The value to assert the field is not equal too

Examples:

```
>>> for ea in xc.expel_alerts.search(close_comment=neq("foo")):
>>>     print("%s has a close comment that is not equal to 'foo'" % ea.expel_
↪ name)
```

class pyexclient.workbench.**notnull** (*filter_value=True*)

Bases: *pyexclient.workbench.base_filter*

The notnull operator is used to search for fields that are not null.

Examples:

```
>>> for ea in xc.expel_alerts.search(close_comment=notnull()):
>>>     print("%s has a close comment of %s" % (ea.expel_name, ea.close_
↪ comment))
```

class pyexclient.workbench.**operator** (*filter_value*)

Bases: *object*

Base class for all operators. This should not be used directly.

class pyexclient.workbench.**relationship** (*rel_path, value*)

Bases: *pyexclient.workbench.operator*

relationship operator allows for searching of resource objects based on their relationship to other resource objects. Passed as arg to search

Parameters

- **rel_path** (*str*) – A dot notation of the relationship path to a resource object.

- **value** (*object*) – The value the `rel_path` be compared to. This can be an operator, or a primitive value.

Examples:

```
>>> for inv_action in xc.investigative_actions.search(relationship(
↳ "investigation.close_comment", notnull()):
>>>     print("Found investigative action associated with an investigation_
↳ that has no close comment.")
```

class `pyexclient.workbench.sort` (*sort*, *order='asc'*)

Bases: `pyexclient.workbench.operator`

The sort operator passes a sort request to a search. Can add multiple sort operators to a single search. If no sort is provided the default of sorting by `created_at` (`asc`) -> `id` (`asc`) will be used. Passed as arg to search TODO enforce this with asserts

Parameters **sort** (*str*) – The column to sort on. Expects `asc` or `desc`. The database will translate `asc`->+ and `desc`->-

class `pyexclient.workbench.startswith` (*swith*)

Bases: `pyexclient.workbench.base_filter`

The startswith operator is used to search for values that start with a specified string..

Parameters **value** (*str*) – The startswith string

Examples:

```
>>> for ea in xc.expel_alerts.search(close_comment=startswith("foo")):
>>>     print("%s starts with foo in the close comment" % ea.expel_name)
```

class `pyexclient.workbench.window` (*start*, *end*)

Bases: `pyexclient.workbench.base_filter`

The window operator is used to search a specific field that is within a window (range) of values

Parameters

- **start** (`Union[str, int, datetime.datetime]`) – The beginning of the window range
- **end** (*str*) – The end of the window range

Examples:

```
>>> for ea in xc.expel_alerts.search(created_at=window("2020-01-01", "2020-05-
↳ 01")):
>>>     print("%s was created after 2020-01-01 and before 2020-05-01" % ea.
↳ expel_name)
```
